

Estimated Current Ranges of Threatened and Endangered Species: List of Species by County  
 Nebraska Natural Heritage Program  
 Nebraska Game and Parks Commission  
 Version: June 2015

This table of species by county is based on the data product "Range maps for listed species in Nebraska, compiled and edited by the Nebraska Natural Heritage Program, June 2015." The map product was based on documented occurrences of listed species and expert knowledge about the distribution of species and suitable habitat. For a given county-species combination, the range of the given species covers some portion of the county (from all to very little). The individual species range map would need to be reviewed to determine if a particular location within the county is within the species's range. Because range maps are by their nature approximate, a given county-species combination was excluded from this table if the area covered was very small (less than 20 square kilometers). Included in the list are all federal and state listed species. Species Status: FE=Federal Endangered, FT=Federal Threatened, SE=State Endangered, ST=State Threatened.
