

## Nebraska Wetland Habitat Conditions and Pumping Plans

For wetlands in the Rainwater Basin and other wetlands where we have water delivery capability

**Date: November 3, 2021**

Note that this will likely be the last update for the fall of 2021, unless there are major changes in conditions

These updates are provided by the Nebraska Game and Parks Commission, with input from U.S. Fish and Wildlife Service and Ducks Unlimited.

**Please note that for a variety of reasons, the pumping plans can change.**

Wetland conditions also can change quickly, so it is best to scout areas ahead of time if possible.

<sup>1</sup>Subjective estimate of conditions based on best professional judgement by the area manager considering vegetation density and the amount of water ponded.

<sup>2</sup>WMA= Wildlife Management Areas are owned and managed by the Nebraska Game and Parks Commission.

<sup>3</sup>WPAs are not owned by the Nebraska Game and Parks Commission. They are Waterfowl Production Areas (WPA) owned and managed by the U.S. Fish and Wildlife Service.

We will share what we know about these areas, for additional information, please visit their web site at: [http://www.fws.gov/refuge/rainwater\\_basin\\_wmd/](http://www.fws.gov/refuge/rainwater_basin_wmd/)

**Please note that for a variety of reasons, the pumping plans can change.**

**Wetland conditions also can change quickly, so it is best to scout areas ahead of time if possible.**

**Please note that not all wetlands are pumped. Many existing public areas cannot be pumped fully because the USFWS**

**or the Nebraska Game and Parks Commission do not own enough of the basin. Some areas do not have operational wells and/or pumps.**

**Some areas are not pumped due to management/restoration projects, or because it has been determined that pumping would not be beneficial at this point in time.**

**In addition to hunting, wetlands are pumped to provide habitat for migrating waterfowl and the other water birds, to provide areas for people to observe wildlife, and to spread out the distribution of migrating birds and reduce the possibility of disease outbreaks.**
