

# Little and Big Matching Game

## Materials Needed:

- Copies of the Matching Cards (laminated for re-use if possible)

## Time:

approximately 20 minutes

## Skills:

Science (animals - offspring)

Art (drawing)

## Procedure:

Give each student one matching card. Instruct students to go around the room to find their match.

Once all students have found their match, have them work with their partner to compare and contrast the images of the young and adult animals. Students should come to the conclusion that the adult and young look similar.

You can play the game again giving each student a different card and again asking them to find their partner.

Once you are done, place the cards at an individual learning station for students to explore throughout the day.
