This table summarizes Tom Roster's analyses to date of the waterfowl lethality data bases for certain of the 15 U.S. steel versus lead waterfowl shooting tests run between 1968 & 1982 & one steel-only pheasant shooting test plus lethality data bases owned by ammunition companies for birds taken with nontoxic shotshell loads Roster tested for them & the CONSEP organization.

Note: Steel #BBB (.190") and HEVI-Shot #2 (.150") have exhibited the best all-around performance for taking geese; steel #3 (.140") and HEVI-Shot #4 (.130") the best all-around performance for taking ducks; and steel #2 and HEVI-Shot #4 the best all-around performance for taking ring-necked pheasants.

<sup>1</sup>These findings are derived from testing 3" 20 gauge; 2 3/4", 3" and 3 1/2" 12 gauge; and 3 1/2" 10 gauge steel loads; plus 3" 20 gauge and 2 3/4" and 3" 12 gauge HEVI-Shot loads.
